RF-18001

Seal ring material is top, can be completely sealed engine compartment, the filter will not loose when working in a very low temperature and reliable performance.

Threaded accurately, smoothly without burr, backwards chamfering, anti-burr into machine, easy loading and unloading.

Metal end caps have a good surface coating to ensure the greatest corrosion resistance.

Using spiral central tube, to meet the product flow area requirement and at the same time, the filter support strength is greatly enhanced.

Using high-precision film material, with large dust holding capacity, can effectively prevent wear and tear, in line with the new engine on the filter of the new requirements.

Shell with high-quality steel, heavy, high compressive strength, good impulse resistance, inwall is clean without impurities; surface is automatic powder coated, smoothly and evenly to achieve the greatest protection.

Air Filter Elements

Using imported high quality materials,high precision, high dust holding capacity, good permeability, stable performance.

Special filter paper embossing technology, fold uniformly, vertically and smoothly, more folds , more filter area increases.

With pioneered net lock technology,no burr, no rust; with thick net, so hardness is stronger,can effectively protect filter paper from injury,and with grid smaller net,can effectively prevent particles to enter inside.

Using high-quality sealing tape, strong and flexible,not hard or bad; using AB glue,epoxy glue double paste,sealing performance enhanced.

Use high quality environmental friendly PU materials and molding technology,to ensure good end-elasticity,can against high pressure,and high or low temperature, seal firmly.
